

## **Maxson Automatic Machinery Company**

### **MAXSON Series 200 Stacker**

Easily retrofitted on to ruling, paper folding, embossing, sheeting and other converting equipment where sheets are manually removed, the Series 200 Stacker provides a well jogged pile and eliminates the need for continuous Operator attention at the collecting area. Features include:

- Automatic feed down table,
- Elevator brake motor and
- Independent jogging system

The feed down unit automatically lowers the load table as the pile height increases, reducing the need for frequent sheet removal. Capable of stacking loads up to 3,200 pounds (1,455 kilograms) and a pile height up to 61" (1550 mm), the Series 200 Stacker can handle sheets up to 65" (1650 mm) wide and between 10" - 55" (254 mm - 1400 mm) long. The stacker can also be equipped with an extending grid option. The grid temporarily holds the sheeted stock while quipped with an extending grid option. The grid temporarily holds the sheeted stock while the finished skid is off loaded.
